Exercise

Writer popularity

- Import `writers.csv` to the database.

- We want to monitor writer performance regularly the number of shares each writer gets per month/year. The goal is to find an efficient query for that.

- Compare 3 different query plans obtained via `explain`.

- **Some things you can try:**

    i. Accidental product join (`select .. from a,b`).

    ii. Using a `substr` function in the join for parsing the date.

    iii. Creating a `month/year` column before join.

    iv. Create a fancy index (join/partition).

    v. Before and after statistics collection.
